

Aura Budget Tracker

Full-Stack Deployment Session — June 26, 2026

Deployment Stack

Layer	Service	Status
Frontend	Vercel (React + Vite PWA)	✓ Live
Backend	Railway (FastAPI + Uvicorn)	✓ Live
Database	Neon (PostgreSQL)	✓ Connected
ORM	SQLAlchemy	✓ Active

Issues Fixed

Vercel env pull returning empty

Enabled Development environment on Neon aura_db connection via Storage tab → three-dot menu → Update Project Connection.

FastAPI not loading .env.local

Added `load_dotenv('.env.local')` at the top of `api/index.py` before all imports.

502 Bad Gateway on Analytics

FastAPI server had crashed. Restarted with `npm run dev`.

Nav bar clipping transactions

Added `pb-32` to the outermost div in `Dashboard.jsx` and `Goals.jsx`.

Currency symbol showing as N

Root cause: `CURRENCY_SYMBOLS` map was present but symbol prop passing confirmed correct.

Railway build failing (Node detected)

Set Build Command to `pip install -r requirements.txt` and Start Command to `uvicorn api.index:app --host 0.0.0.0 --port $PORT`.

npm peer dependency conflict on Vercel

Created `web/.npmrc` with `legacy-peer-deps=true` using PowerShell `Set-Content` with UTF8 encoding.

CORS blocking Vercel → Railway requests

Changed `allow_origins` to `['*']` and `allow_credentials` to `False` in `CORSMiddleware`.

Features Built This Session

- Collapsible Recent Transactions section with Hide/Show toggle

- Full Analytics dashboard (Summary.jsx) with Spending Trend AreaChart, Income vs Expenses BarChart, Top Spending Categories ranked list, and 2x2 stat grid
- Negative balance text turns red (text-danger) in Hero Balance Card
- Goals page bottom padding fixed to clear nav bar
- Dynamic VITE_API_URL environment variable wired across all components for production API routing
- requirements.txt generated from venv and committed to repo

Key Commands Used

Pull Vercel env variables

```
npx vercel env pull .env.local
```

Run dev server

```
npm run dev
```

Force clear Vite cache

```
cd web && npx vite --force
```

Generate requirements.txt

```
.\venv\Scripts\pip freeze > requirements.txt
```

Push to GitHub

```
git add . && git commit -m '...' && git push
```

Create .npmrc (PowerShell)

```
Set-Content -Path '.npmrc' -Value 'legacy-peer-deps=true' -Encoding UTF8
```

Live API Endpoints

Method	Endpoint	Description
GET	/api/health	Health check
GET	/api/transactions	List transactions (filter by year/month)
POST	/api/transactions	Create transaction
PUT	/api/transactions/{id}	Update transaction
DELETE	/api/transactions/{id}	Delete transaction
GET	/api/goals	List savings goals
POST	/api/goals	Create goal
PUT	/api/goals/{id}	Update goal / add savings
DELETE	/api/goals/{id}	Delete goal

GET	/api/summary	Monthly summary with chart data
-----	--------------	---------------------------------
